

Air-Cooled Liquid Chillers with Integrated Hydronic Module

AQUASNAP™
with PURON® refrigerant

Quality Management System Approval

Model shown is with
low-noise option

30RB 162-802

Nominal cooling capacity 163-760 kW

The new generation of Aquasnap Puron liquid chillers features the latest technological innovations:

- ozone-friendly refrigerant R-410A
- scroll compressors
- low-noise fans made of a composite material
- auto-adaptive microprocessor control
- aluminium micro-channel heat exchangers (MCHX)

The Aquasnap can be equipped with an integrated hydronic module, limiting the installation to straightforward operations like connection of the power supply and the chilled water supply and return piping.

Features

Quiet operation

- Compressors
 - Low-noise scroll compressors with low vibration level
 - The compressor assembly is installed on an independent chassis and supported by flexible anti-vibration mountings
 - Dynamic suction and discharge piping support, minimising vibration transmission (Carrier patent)
 - Acoustic compressor enclosure, reducing radiated noise emissions (option)

- Condenser section
 - Condenser coils in V-shape with an open angle, allowing quieter air flow across the coil
 - Low-noise 4th generation Flying Bird fans, made of a composite material (Carrier patent) are now even quieter and do not generate intrusive low-frequency noise
 - Rigid fan installation for reduced noise (Carrier patent)

Easy and fast installation

- Integrated hydronic module (option)
 - Centrifugal low or high-pressure water pump (as required), based on the pressure loss of the hydronic installation
 - Single or dual pump (as required) with operating time balancing and automatic changeover to the back-up pump if a fault develops
 - Water filter protecting the water pump against circulating debris
 - High-capacity membrane expansion tank ensures pressurisation of the water circuit
 - Thermal insulation and frost protection down to -20°C, using an electric resistance heater (see table of options)
 - Pressure gauge to check filter pollution and measure the system water flow rate
 - Water flow control valve

Телефон: +7 (495) 545-41-77

E-mail: info@klimat-ok.ru

www.klimat-ok.ru

- Simplified electrical connections
 - A single power supply point without neutral (30RB 162-522)
 - Main disconnect switch with high trip capacity (see table of options)
 - 24 V control circuit without risk from a transformer included
- Fast commissioning
 - Systematic factory operation test before shipment
 - Quick-test function for step-by-step verification of the instruments, electrical components and motors

Economical operation

- Increased energy efficiency at part load
 - The refrigerant circuit includes several compressors connected in parallel. At part load, around 99% of the operating time, only the compressors that are absolutely necessary operate. At these conditions the compressors operating are even more energy efficient, as they use the total condenser and evaporator capacity.
 - The electronic expansion device (EXV) allows operation at a lower condensing pressure (EER optimisation).
 - Dynamic superheat management for better utilisation of the evaporator heat exchange surface
 - All-aluminium micro-channel condenser (MCHX), more efficient than a copper/aluminium coil
- Reduced maintenance costs
 - Maintenance-free scroll compressors
 - Fast diagnosis of possible incidents and their history via the Pro-Dialog Plus control
 - R-410A refrigerant is easier to use than other refrigerant blends

Environmental care

- Ozone-friendly R-410A refrigerant
 - Chlorine-free refrigerant of the HFC group with zero ozone depletion potential
 - High-density refrigerant, therefore less refrigerant required
 - Very efficient - gives an increased energy efficiency ratio (EER)
 - 40% reduction in the refrigerant charge through use of the micro-channel heat exchangers (MCHX)
- Leak-tight refrigerant circuit
 - Brazed refrigerant connections for increased leak-tightness
 - Reduction of leaks as no capillary tubes and flare connections are used
 - Verification of pressure transducers and temperature sensors without transferring refrigerant charge

Superior reliability

- State-of-the-art concept
 - Cooperation with specialist laboratories and use of limit simulation tools (finite element calculations) for the design of the critical components, e.g. motor supports, suction/discharge piping
 - Compressor control box installed on the cold side of the compressor (Carrier patent)
 - All-aluminium micro-channel heat exchanger (MCHX) offers 3.5 times higher corrosion resistance than a conventional coil. The all-aluminium construction eliminates the formation of galvanic currents between aluminium and copper that are responsible for the coil corrosion in saline or corrosive atmospheres.
- Auto-adaptive control
 - Control algorithm prevents excessive compressor cycling and permits reduction of the water quantity in the hydronic circuit (Carrier patent).
 - Automatic compressor unloading in case of abnormally high condensing pressure. If an anomaly occurs (e.g. fouled condenser coil, fan failure) Aquasnap continues to operate, but at reduced capacity.
- Exceptional endurance tests
 - Corrosion resistance tests in salt mist in the laboratory
 - Accelerated ageing test on components that are submitted to continuous operation: compressor piping, fan supports
 - Transport simulation test in the laboratory on a vibrating table. The test is based on a military standard and equivalent to 4000 km by truck.

Pro-Dialog Plus control

Pro-Dialog Plus combines intelligence with operating simplicity. The control constantly monitors all machine parameters and precisely manages the operation of compressors, expansion devices, fans and of the evaporator water pump for optimum energy efficiency.

- Energy management
 - Internal time schedule clock: permits chiller on/off control and operation at a second set point
 - Set point reset based on the outside air temperature or the return water temperature
 - Master/slave control of two chillers operating in parallel with operating time equalisation and automatic change-over in case of a unit fault.
 - Start/stop control based on the air temperature
- Ease-of-use
 - User interface with synoptic diagram for intuitive display of the principal operating parameters: number of compressors operating, suction/discharge pressure, compressor operating hours, set point, air temperature, entering/leaving water temperature
 - Ten menus for direct access to all machine commands, including fault history, allowing fast and complete chiller diagnostics

Pro-Dialog Plus operator interface

Remote management (standard)

A simple two-wire communication bus between the RS485 port of the Aquasnap and the Carrier Comfort Network offers multiple remote control, monitoring and diagnostic possibilities. Carrier offers a vast choice of control products, specially designed to control, manage and supervise the operation of an air conditioning system. Please consult your Carrier representative for more information on these products.

- Start/stop: opening of this contact will shut down the unit
- Dual set point: closing of this contact activates a second set point (example: unoccupied mode)
- Demand limit: closing of this contact limits the maximum chiller capacity to a predefined value
- User safety: this contact is connected in series with the water flow switch and can be used for any customer safety loop
- Heat reclaim (option): closing of this contact allows heat reclaim mode operation
- Water pump 1 and 2 control*: these outputs control the contactors of one or two evaporator water pumps
- Water pump on reversal*: these contacts are used to detect a water pump operation fault and automatically change over to the other pump
- Operation indication: this volt-free contact indicates that the chiller is operating (cooling load) or that it is ready to operate (no cooling load)
- Alert indication: this volt-free contact indicates the presence of a minor fault
- Alarm indication: this volt-free contact indicates the presence of a major fault that has led to the shut-down of one or two refrigerant circuits

* contacts already supplied with the hydronic module option

Remote management (EMM option)

- Room temperature: permits set point reset based on the building indoor air temperature (with Carrier thermostat)
- Set point reset: ensures reset of the cooling set point based on a 4-20 mA or 0-5 V signal
- Demand limit: permits limitation of the maximum chiller demand based on a 4-20 mA or 0-5 V signal
- Demand limit 1 and 2: closing of these contacts limits the maximum chiller capacity to three predefined values
- User safety: this contact can be used for any customer safety loop, closing of the contact generates a specific alarm
- Ice storage end: when ice storage has finished, this input permits return to the second set point (unoccupied mode)
- Time schedule override: closing of this contact cancels the time schedule effects
- Out of service: this signal indicates that the chiller is completely out of service
- Chiller capacity: this analogue output (0-10 V) gives an immediate indication of the chiller capacity
- Compressor operation: this contact signals that one or several compressors are in operation

All aluminium micro-channel heat exchanger (MCHX)

Already utilised in the automobile and aeronautical industries for many years, the MCHX heat exchanger is entirely made of aluminium. This one-piece concept significantly increases its corrosion resistance by eliminating the galvanic currents that are created when two different metals (copper and aluminium) come into contact in traditional heat exchangers. Unlike traditional heat exchangers the MCHX heat exchanger can be used in moderate marine and urban environments.

From an energy efficiency point-of-view the MCHX heat exchanger is approximately 10% more efficient than a traditional coil and allows a 40% reduction in the amount of refrigerant used in the chiller. The low thickness of the MCHX reduces air pressure losses by 50% and makes it less susceptible to fouling (e.g. by sand) than a traditional coil. Cleaning of the MCHX heat exchanger is very fast using a high-pressure washer.

Part load performances

With the rapid increase in energy costs and the care about environmental impacts of electricity production, the power consumption of air conditioning equipment has become an important topic. The energy efficiency of a liquid chiller at full load is rarely representative of the actual performance of the units, as on average a chiller works less than 5% of the time at full load.

The heat load of a building depends on many factors, such as the outside air temperature, the exposure to the sun and its occupation.

Consequently it is preferable to use the seasonal energy efficiency, calculated at several operating points that are representative for the unit utilisation.

ESEER (EUROVENT)

The ESEER (European seasonal energy efficiency ratio) permits evaluation of the average energy efficiency at part load, based on four operating conditions defined by Eurovent. The ESEER is the average value of energy efficiency ratios (EER) at different operating conditions, weighted by the operating time.

ESEER (European seasonal energy efficiency ratio)

Load, %	Air temperature, °C	Energy efficiency	Operating time, %
100	35	EER ₁	3
75	30	EER ₂	33
50	25	EER ₃	41
25	20	EER ₄	23
ESEER = EER ₁ x 3% + EER ₂ x 33% + EER ₃ x 41% + EER ₄ x 23%			
Note: Constant leaving water temperature = 7°C			

Part load performances in accordance with Eurovent

Options and accessories

Options	No.	Description	Advantages	Use
Condenser with anti-corrosion post-treatment	2B	Coils with copper tubes and aluminium fins with Blygold Polual treatment	Improved corrosion resistance, recommended for marine, industrial and rural environments	30RB 162-802
Corrosion protection, traditional coils	3A	Pre-treated aluminium fins (polyurethane and epoxy)	Improved corrosion resistance, recommended for marine, moderate or urban environments	30RB 162-802
Unit for low leaving water temperature	6	Leaving water temperature of +3°C to -10°C.	All low-temperature applications: ice storage, cold stores, process cooling etc.	30RB 162-402
Unit for indoor installation with discharge ducts	12	Fans with available pressure	Ducted condenser air discharge, optimised condensing temperature control, based on the operating conditions and system characteristics	30RB 162-802
Low noise level	15	Sound absorbing compressor enclosure	Noise emission reduction	30RB 162-802
Very low noise level	15LS	Sound absorbing compressor enclosure and low-speed fans	Noise emission reduction	30RB 162-802
Grilles	23	Metallic grilles on all four unit faces (this option includes the supply of enclosure panels)	Improved aesthetics	30RB 162-802
Enclosure panels (for units with copper/aluminium coils only)	23A	Side panels on each end of the coils	Improved aesthetics	30RB 162-802
Electronic starter	25	Electronic starter on each compressor	Reduced start-up current	30RB 162-522
Winter operation down to -20°C	28	Fan speed control via frequency converter	Stable unit operation when the air temperature is between 0°C and -20°C	30RB 162-802
Winter operation down to -10°C	28B	Twin-speed lead fan for each circuit	Stable unit operation when the air temperature is between 0°C and -10°C	30RB 162-802
Evaporator and water piping frost protection	41	Electric heater on the evaporator and the water inlet/outlet piping	Evaporator frost protection down to -20°C outside temperature	30RB 162-802
Evaporator, water piping and hydronic module frost protection	42A	Electric heaters on the evaporator, the water inlet/outlet piping and hydronic module	Evaporator and hydronic module frost protection down to -20°C outside temperature	30RB 162-522
Partial heat reclaim	49	Partial heat reclaim by desuperheating of the compressor discharge gas	Free high-temperature hot-water production simultaneously with chilled water production	30RB 162-802
Total heat reclaim	50	See heat reclaim option. Note: Unit equipped with coils with copper tubes and aluminium fins	Free hot water production simultaneously with chilled water production	30RB 262-522
Twinning	58	Unit equipped with an additional field-installed leaving water temperature sensor, allowing master/slave operation of two chillers connected in parallel	Optimised operation of two chillers connected in parallel with operating time equalisation	30RB 162-802
Main disconnect switch without fuse (standard for sizes 162-262)	70	Factory-installed main electric disconnect switch in the control box	Ease-of-installation and compliance with local electrical regulations	30RB 302-802
Main disconnect switch with fuse	70D	Factory-installed main electric disconnect switch with fuse in the control box	Same advantage as main disconnect switch and reinforced anti-short circuit protection	30RB 302-802
Evaporator with aluminium jacket	88	Evaporator thermal insulation protection by aluminium sheets	Improved resistance to climatic aggression	30RB 162-802
Evaporator and hydronic module with aluminium jacket	88A	Evaporator and water piping thermal insulation protection by aluminium sheets	Improved resistance to climatic aggression	30RB 302-522
Suction valve	92	Shut-off valve on the compressor suction piping (discharge valve as standard)	Simplified maintenance	30RB 302-802
Compressor suction and discharge valves	92A	Shut-off valves on the common compressor suction and discharge piping	Simplified maintenance	30RB 162-262
High-pressure single-pump hydronic module	116B	See hydronic module option	Easy and fast installation	30RB 162-522
High-pressure dual-pump hydronic module	116C	See hydronic module option	Easy and fast installation, operating safety	30RB 162-522
Low-pressure single-pump hydronic module	116F	See hydronic module option	Easy and fast installation	30RB 162-522
Low-pressure dual-pump hydronic module	116G	See hydronic module option	Easy and fast installation, operating safety	30RB 162-522
Direct-expansion free-cooling system	118A	See free-cooling option. Note: Unit equipped with coils with copper tubes and aluminium fins	Economic chilled-water production at low outside temperature	30RB 232-522
JBus gateway	148B	Two-directional communications board, complies with JBus protocol	Easy connection by communication bus to a building management system	30RB 162-802
Bacnet gateway	148C	Two-directional communications board, complies with Bacnet protocol	Easy connection by communication bus to a building management system	30RB 162-802
LonTalk gateway	148D	Two-directional communications board, complies with LonTalk protocol	Easy connection by communication bus to a building management system	30RB 162-802
Energy Management Module EMM	156	See controls manual	Easy wired connection to a building management system	30RB 162-802
Safety valve with three-way valve fitted	194	Three-way valve upstream of the safety valves (not compatible with BPHE version)	Safety valve inspection and replacement facilitated without refrigerant loss	30RB 162-802
Russian code compliance	199	GOST certification	Conformance with Russian regulations (GOST)	30RB 162-802
Conformance with Australian regulations	200	Heat exchanger approved to Australian code	-	30RB 162-802
Storage unit above 48°C	241	Refrigerant charge stored in the condenser. Option not compatible with MCHX coils; Cu/Al coils are required to store the charge	Unit transport by container only possible with this option	30RB 162-802
MCHX anti-corrosion protection	263	MCHX protection by the Carrier factory for applications in aggressive environments	The Super Enviro-Shield option was developed to increase the application range of MCHX coils to severe environmental conditions: this option is compulsory for industrial and coastal environments.	30RB 162-802
Shell-and- tube evaporator	280	Different heat exchanger type	Ensures compatibility with other options than those available with the standard unit (see Electronic Catalogue)	30RB 162-262
Accessories		Description	Advantages	Use
Connection sleeve		Piping to be welded with Victaulic connection	Ease-of-installation	30RB 162-802
Energy Management Module EMM		See controls manual	Easy connection by wired connection to a building management system	30RB 162-802
Scrolling Marquee Interface		Remotely installed user interface (communication bus)	Remote chiller control up to 300 m	30RB 162-802
Power cable connection side extension		Side extension on the power control to allow a reduced cable bend radius	Use of thicker power cables	30RB 302-802
Connection sleeve, standard unit		Water inlet/outlet extension for connection with a Victaulic collar on the water inlet/outlet piping	Facilitates connection	30RB 162-262

* Power input of the compressor(s) + fan(s) at maximum unit operating conditions. Values given on the unit name plate.

** Nominal unit current draw at nominal conditions: evaporator entering/leaving water temperature 12°C/7°C, outdoor air temperature 35°C. The current values are given at 400 V nominal voltage.

*** Maximum unit operating current at maximum unit power input and 400 V.

† Maximum instantaneous starting current at 400 V nominal voltage and operating limit values with compressor in across-the-line start (maximum operating current of the smallest compressor(s) + fan current + locked rotor current of the largest compressor).

†† Standard for 30RB 162 to 262 and option for 30RB 302 to 802

‡ Not available for 30RB 162 to 262 and option for 30RB 302 to 802

Note: Units 30RB 602-802 have two electrical connection points.

Operating limits

Evaporator water flow rate

30RB 162-262 “B” standard units (with plate heat exchanger)

30RB	Minimum flow rate, l/s	Maximum flow rate, l/s*
162	2.8	13.9
182	2.8	13.9
202	2.8	14.3
232	3.0	14.3
262	3.5	14.3

30RB 162-262 “B” with option 280 (shell-and-tube heat exchanger) and 30RB 302-802

30RB	Minimum flow rate, l/s	Maximum flow rate, l/s*
162	2.8	28.1
182	2.8	28.1
202	2.8	28.1
232	3.0	26.7
262	3.5	26.7
302	3.9	26.7
342	4.4	29.4
372	4.9	29.4
402	5.2	29.4
432	5.8	31.1
462	6.1	31.1
522	6.9	31.1
602	7.9	50.6
672	8.7	50.6
732	9.6	50.6
802	10.3	50.6

* The maximum flow rate corresponds to a pressure loss of 100 kPa (heat exchanger without hydronic module).

Evaporator water temperature, °C	Minimum	Maximum
Entering water temperature at shut-down	-	48
Entering water temperature at start-up	6.8	40
Entering water temperature during operation	6.8	25
Leaving water temperature during operation (plate heat exchanger)	5	15
Leaving water temperature during operation (shell-and-tube heat exchanger)	3.3	15

Condenser air temperature, °C	Minimum	Maximum
Standard unit	0	48
With winter operation option (No. 28)	-20	48
With winter operation option (No. 28B)	-10	48

Operating range - 30RB 162-262 “B” standard units (with plate heat exchanger)

Operating range - 30RB 162-262 “B” with option 280 (shell-and-tube heat exchanger) and 30RB 302-802

Notes:
Evaporator $\Delta T = 5$ K
The evaporator is protected against frost down to -20°C .

Legend:

- Standard unit operating at full load.
- Operating range, units equipped with options 28 and 28B “Winter operation”.
- Option 28 (with variable-speed lead fan for each circuit) allows operation down to -20°C outside temperature.
- Option 28B (with two-speed lead fan for each circuit) allows operation down to -10°C outside temperature.
- Moreover the unit must either be equipped with the evaporator frost protection option or the water loop must be protected against frost by the installer, using an anti-freeze solution.

Legend:

LWT Leaving water temperature

CAP kW Cooling capacity

COMP kW Compressor power input

UNIT kW Unit power input (compressors, fans and control circuit)

COOL l/s Evaporator water flow rate

COOL kPa Evaporator pressure drop

Application data:

Standard units, refrigerant: R-410A

Evaporator temperature rise: 5 K

Evaporator fluid: chilled water

Fouling factor: 0.18 x 10⁻⁴ (m² K)/W

Performances in accordance with EN 14511.

Hydronic module (option 116)

The hydronic module option saves a lot of installation time. The chiller is factory-equipped with the main components for the hydronic system: screen filter, water pump, expansion tank, safety valve and water flow control valve.

Several water pump types are available to suit any application: primary single or dual low-pressure pump or single or dual high-pressure pump (30RB 162-522).

An automatic pump start-up algorithm protects the heat exchanger and the hydronic module piping against frost down to -10°C outside temperature, if the evaporator frost protection option is installed. If necessary increased frost protection down to -20°C is possible by adding the heater option to the hydronic module piping (see options 41 and 42A).

The hydronic module option is integrated into the chiller without increasing its dimensions and saves the space normally used for the water pump.

Hydronic module

Typical hydronic circuit diagram

Legend

Components of unit and hydronic module

- 1 Victaulic screen filter
- 2 Expansion tank
- 3 Safety valve
- 4 Available pressure pump
- 5 Pressure tap valve (see Installation Manual)
- 6 Pressure gauge to measure the component pressure loss (see Installation Manual)
- 7 System vent valve, pressure gauge
- 8 Drain valve
- 9 Water flow control valve
- 10 Heat exchanger
- 11 Evaporator heater (option)
- 12 Hydronic module heater (option)
- 13 Air vent (evaporator)
- 14 Water purge (evaporator)
- 16 Flow switch
- 17 Water temperature sensor

System components

- 18 Air vent
- 19 Flexible connection
- 20 Shut-down valves
- 21 Charge valve

--- Hydronic module (units with hydronic module)

Notes:

With option 42A the unit hydronic module is protected against frost by electric heaters. The unit evaporator must be protected against frost (anti-freeze solution or optional electric heater)

Partial heat reclaim using desuperheaters (option 49)

This option permits the production of free hot water using heat reclaim by desuperheating the compressor discharge gases. The option is available for the whole 30RB range.

A plate heat exchanger is installed in series with the air condenser coils on the compressor discharge line of each circuit.

Total heat reclaim (option 50)

Suitable for heating, domestic hot water preparation, agriculture and food industry, industrial processes and other hot-water requirements.

With the total heat reclaim option it is possible to reduce the energy consumption bill considerably compared to conventional heating equipment such as fossil fuel boilers or electric water tanks.

Operating principle

If hot water production is required, the compressor discharge gases are directed towards the heat reclaim condenser. The refrigerant releases its heat to the hot water that leaves the condenser at a temperature of up to 55°C. In this way 100% of the heat rejected by the liquid chiller can be used to produce hot water. When the demand for heat is satisfied, the hot gas is again directed towards the air condenser where the heat is rejected to the outside air by the fans. Hot water temperature control is ensured by the chiller Pro-Dialog control that independently controls the reclaim operation of each refrigerant circuit.

DX free-cooling system (option 118A)

The DX free-cooling option permits significant energy savings for all applications that require cooling in winter. In the free-cooling mode the compressors are stopped and only the fan and cooling micro-pump are running. The changeover from compressor cooling mode to free-cooling mode is automatically controlled by the Pro-Dialog control, based on the chiller heat load and the temperature difference between chilled water and ambient air.

Important: In order to optimise chiller performances, it is recommended to use the leaving water set point reset function.

Operating principle

When the chilled water-air temperature difference exceeds a threshold value, the Pro-Dialog control carries out a comparison between the instantaneous chiller cooling capacity and the available free-cooling capacity. If the operating conditions allow free-cooling operation, the compressors are stopped, a three-way valve on the suction piping connects the evaporator with the condenser, allowing the migration of the refrigerant vapours to the condenser. The refrigerant condenses in the condenser coils, and the cooling micro-pump transports the liquid to the evaporator. The cooling capacity in free-cooling mode is controlled by the opening of the electronic expansion valve (EXV).

Advantages of the DX free-cooling system

- Operation without glycol
 - Unlike traditional hydronic free-cooling systems that require the use of a glycol solution, the Aquasnap DX free-cooling chiller works with pure water. The evaporator is protected against frost down to -20°C by an electric resistance heater (option).
- Low water pressure losses
 - The Aquasnap DX free-cooling chiller does not include a three-way valve nor free-cooling coils connected in series with the evaporator. The Aquasnap free-cooling chiller has the same water pressure losses as a standard chiller.
- Weight and dimensions gain
 - The DX free-cooling option has little impact on the weight of the liquid chiller.
 - The Aquasnap free-cooling chiller has the same dimensions as a standard chiller.
- Increased energy efficiency
 - In free-cooling mode only the fans and the cooling micro-pump run. At an air-water temperature difference of 10 K for example the average chiller energy efficiency (EER) is 15 (kW/kW).
 - In the mechanical cooling mode chiller thermal and energy performances are not reduced by the use of a water-glycol solution.
 - As the pressure losses of the water circuit are low, the water pumps use less energy.

Units with fans with available pressure for indoor installation (option 12)

This option applies to 30RB units installed inside the building in a plant room. For this type of installation the hot air leaving the air-cooled condensers is discharged by the fans to the outside of the building, using a duct system.

30RB units equipped with fans with available pressure are designed to operate with air discharge ducts with maximum pressure drops of 200 Pa.

To compensate for these pressure drops 30RB units with option 12 are equipped with variable-speed fans with a maximum speed of 19 r/s, instead of 15.8 r/s and fixed-speed fans as for the standard units.

All fans in the same refrigerant circuit are controlled by a single-speed variator and therefore all run at the same speed.

The full-load or part-load speed is controlled by a patented algorithm that permanently optimises the condensing temperature to ensure the best unit energy efficiency (EER) whatever the operating conditions and pressure drops of the system ductwork.

Each refrigerant circuit (A, B and C) must have a separate ducting system to prevent any air recycling between the condensers of the different refrigerant circuits.

In 30RB units with option 12 each fan is equipped with a factory-installed connection interface, allowing the connection to the ducting system for the specific circuit (A, B and C) for each fan. Please refer to the unit dimensional drawings for the exact dimensions of the connection interface.

The unit cooling capacity and energy efficiency ratio (EER) vary depending on the duct pressure drops:

- between 0 and 100 Pa the unit cooling capacity is only slightly affected,
- between 100 and 200 Pa the unit cooling capacity falls considerably depending on the operating conditions (outdoor air temperature and water conditions).

Please refer to the curves below to evaluate the impact of the estimated duct system pressure drop for the installation and the impact of different full load operating conditions on the 30RB unit cooling capacity and EER.

Cooling capacity variations for operating conditions that differ from Eurovent conditions

EER variations for operating conditions that differ from Eurovent conditions

Electrical data notes for 30RB units:

- 30RB 162-522 units have a single power connection point at the main disconnect switch; 30RB 602-802 units have two connection points at the main disconnect switch.
- The control box includes the following standard features:
 - Starter and motor protection devices for each compressor and the fan(s)
 - Control devices
- **Field connections:**
All connections to the system and the electrical installations must be in full accordance with all applicable local codes.
- The Carrier 30RB units are designed and built to ensure conformance with these codes. The recommendations of European standard EN 60 204-1 (corresponds to IEC 60204-1) (machine safety - electrical machine components - part 1: general regulations) are specifically taken into account, when designing the electrical equipment.
- **Electrical reserves:**
Circuit A has disconnect switches and branch sections, designed to supply the evaporator pump power input.

IMPORTANT:

- Generally the recommendations of IEC 60364 are accepted as compliance with the requirements of the installation directives. Conformance with EN 60204 is the best means of ensuring compliance with the Machines Directive § 1.5.1.
- Annex B of EN 60204-1 describes the electrical characteristics used for the operation of the machines.

1. The operating environment for the 30RB units is specified below:

a. Environment* - Environment as classified in EN 60721 (corresponds to IEC 60721):

- outdoor installation*
- ambient temperature range: -20°C to +48°C \pm 1 K, class 4K3*
- altitude: \leq 2000 m
- presence of hard solids, class 4S2 (no significant dust present)
- presence of corrosive and polluting substances, class 4C2 (negligible)
- vibration and shock, class 4M2

b. Competence of personnel, class BA4* (trained personnel - IEC 60364)

2. Power supply frequency variation: \pm 2 Hz.
3. The neutral (N) line must not be connected directly to the unit (if necessary use a transformer).
4. Overcurrent protection of the power supply conductors is not provided with the unit.
5. The factory-installed disconnect switch(es)/circuit breaker(s) is (are) of a type suitable for power interruption in accordance with EN 60947-3 (corresponds to IEC 60947-3).
6. The units are designed for simplified connection on TN(s) networks (IEC 60364). For IT networks derived currents may interfere with network monitoring elements, and it is recommended to create an IT type divider for the system units that require this and/or a TN type divider for Carrier units. Please consult the appropriate local organisations to define the monitoring and protection elements and carry out the electrical installation.

If short circuit currents above those given in the electrical data table are likely, modifications are required. Please contact your local Carrier representative.

NOTE: If particular aspects of an actual installation do not conform to the conditions described above, or if there are other conditions which should be considered, always contact your local Carrier representative.

- * The required protection level for this class is IP43BW (according to reference document IEC 60529). All 30RB units are protected to IP44CW and fulfil this protection condition.
